DETAILED ACTION

Allowable Subject Matter

1. Claims 1-19 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Applicant's invention is drawn to a user interface that simultaneously integrates plurality of desperate telecommunications maintenance and testing applications and systems into a single common control interface. Conventionally, in order for service personnel to perform troubleshooting, billing updates and testing of circuits, the service personnel must perform these tasks on separate systems, each of which have a different interface. The various user interfaces require the service personnel to access multiple terminals and to memorize multiple passwords for each system. Further, service personnel need to familiarize themselves with the differing interfaces and functional flows of the different systems. In addition to the above, the conventional systems are not universally provided with an interface to communicate and transfer information to other systems. The present invention is to provide a single user interface system (GRETA) that interacts with Work Force and Administration (WFA) systems, Operations Support Systems (OSS), Network Monitoring and Analysis (NMA) systems, and REACT 2001 systems.

Prior art of record failed to teach or fairly suggest in combination the apparatus and computer readable medium for storing a program (i.e., a computer platform (e.g., IBM RS6000) having software executed by a computer or processor) that simultaneously integrates plurality of desperate telecommunications maintenance and testing applications and systems into a single common control interface as presented in at least claims 1, 8 and 14.

Art Unit: 2614
